3. Interface.....	4
3.1 "Feed Water" Tab	6
3.2 "System" Tab.....	9
3.3 "Results" Tab.....	11
3.4 "Costs" Tab.....	12

1. Software's Functions

The software is designed to compute parameters of reverse-osmosis systems that use RM Nanotech's membrane elements and allows predicting performance of elements in specific conditions.

The software employs the same 3-stage procedure as those used by other manufacturers:

- 1) Input of Data on Feed Water
 - balancing anions and cations with sodium or chlorides,
 - use of several feed flows,
 - use of water database,
 - use of Na-softener or pH correction to prevent scaling.
- 2) System Configuration Selection
 - use of multiphase and multistage configurations as well as recycles and admixtures,
 - membrane element database with the possibility of using other manufacturers' membranes,
 - database of frequently used industrial systems.
- 3) Estimation of Results and System's Cost
 - filter by system's flows and elements,
 - report print-out or export to a PDF file,
 - displaying warnings and recommendations.

As well:

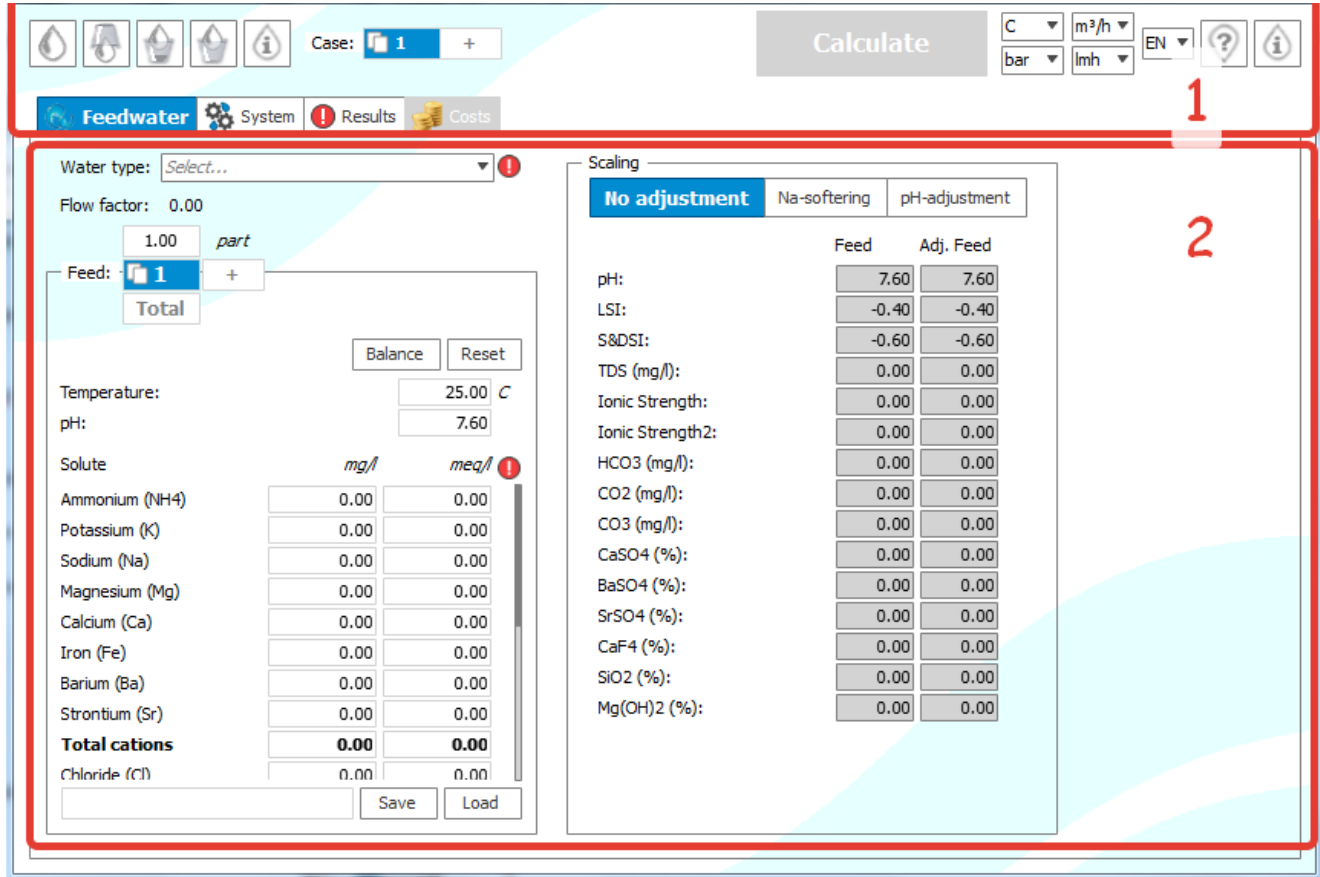

- user-friendly interface
- save and upload for projects
- creation of several versions of a system within a single project
- comprehensive calculation of system's cost
- use of various measurement units
- warnings available at design phase

2. Installation and Start-Up

The software does not require any installation and can run from a folder on any media. It requires a PC with Windows XP or higher. The software is currently available in English and Russian.

3. Interface

The main window comprises two areas:

The upper area (1) contains settings and general tools

- Tools to set measurement units for core system parameters (temperature, pressure, flow, specific permeate flux rate):

Measurement units can be changed at any time with values being immediately recalculated.

- Project-related buttons:

-  - New Project
-  - Open Project
-  - Save Current/Opened Project
-  - Save Project As New
-  - About Project

- Versions panel:
The panel allows creating several versions of various systems within a single project.
- Information button:
- There is also a "Compute" button in the upper panel:

By pressing the button, the system will compute data for the current selected Case. The button will only be active if there are no critical errors in the system.

Critical error is an error that precludes computation, e.g. field blank, incorrect details or parameters set incorrectly. Such fields will be accordingly marked with a symbol.  A full list of errors in the system is on the "Results" tab. Here is an example of an error window:

Each listed message indicates error source and error correction method.

Non-critical errors or warnings represent the second type of errors displayed in the system. For example, a warning occurs when feed water is not anion and cation-balanced or if the maximum permeate recovery rate is exceeded for a membrane element. Warnings are marked with the symbol.

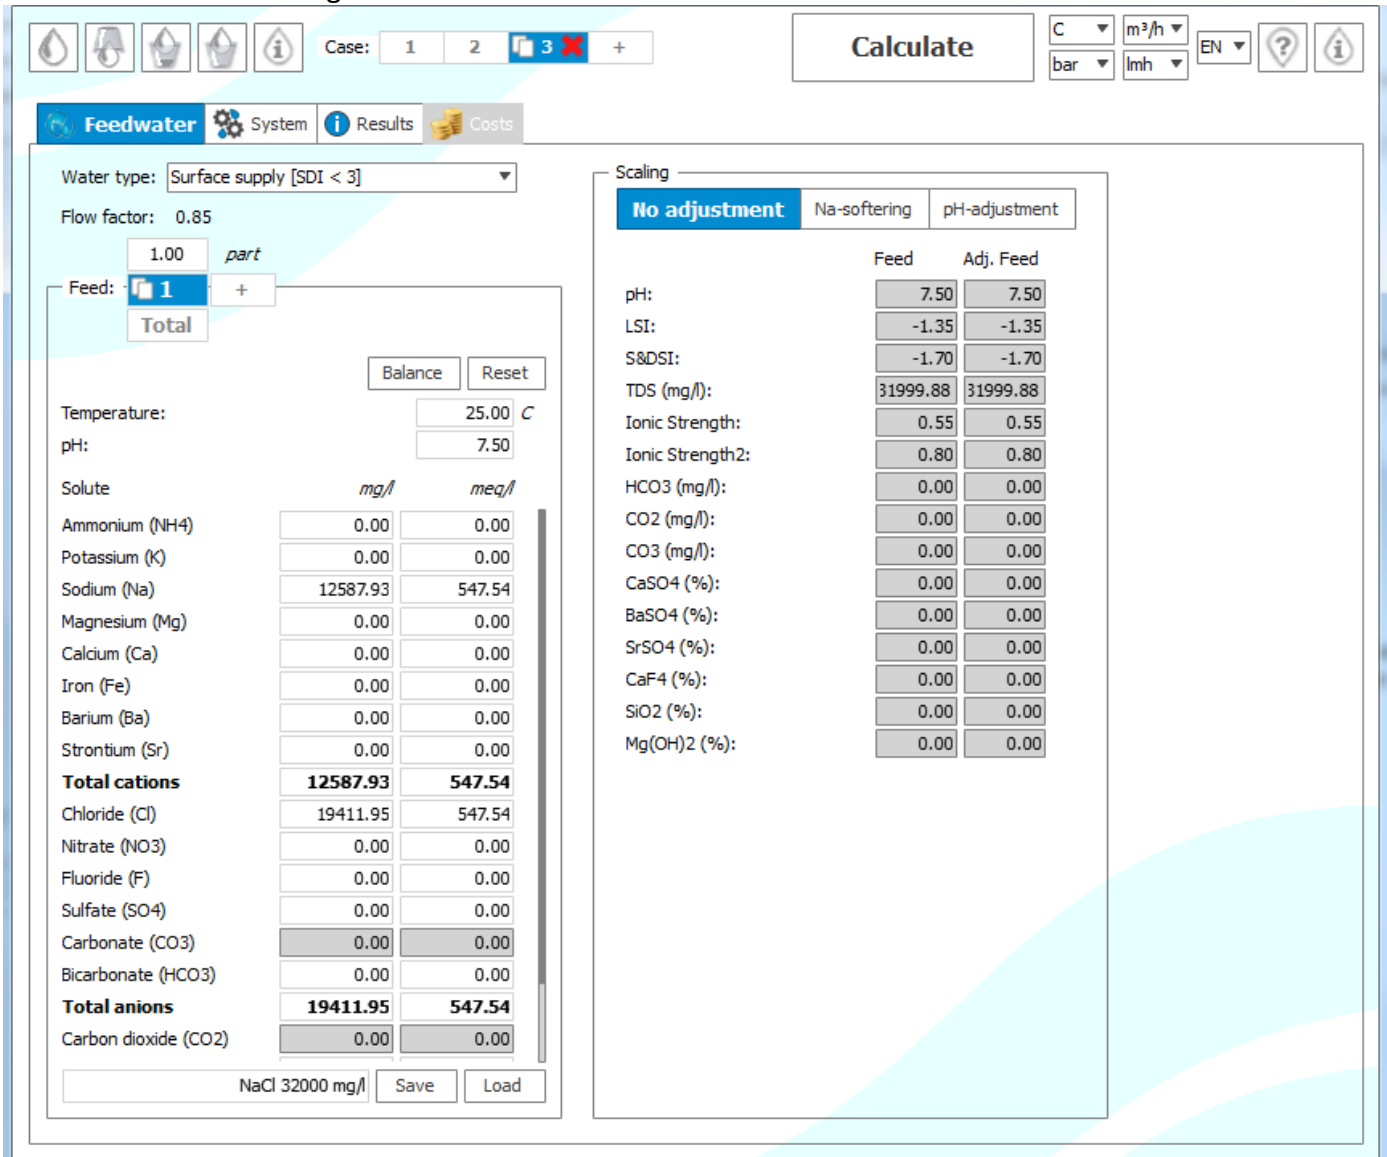

The contents of the rest of the area (2) depend on a *tab* selected. Each tab helps setting certain parameters of the system.

Tabs are depicted in the figure below:

3.1 "Feed Water" Tab

The tab has the following contents:

Case: 1 2 3 X +

Calculate

Water type: Surface supply [SDI < 3]

Flow factor: 0.85

1.00 part

Feed: 1 +

Total

Balance Reset

Temperature: 25.00 C

pH: 7.50

Solute	mg/l	meq/l
Ammonium (NH4)	0.00	0.00
Potassium (K)	0.00	0.00
Sodium (Na)	12587.93	547.54
Magnesium (Mg)	0.00	0.00
Calcium (Ca)	0.00	0.00
Iron (Fe)	0.00	0.00
Barium (Ba)	0.00	0.00
Strontium (Sr)	0.00	0.00
Total cations	12587.93	547.54
Chloride (Cl)	19411.95	547.54
Nitrate (NO3)	0.00	0.00
Fluoride (F)	0.00	0.00
Sulfate (SO4)	0.00	0.00
Carbonate (CO3)	0.00	0.00
Bicarbonate (HCO3)	0.00	0.00
Total anions	19411.95	547.54
Carbon dioxide (CO2)	0.00	0.00

NaCl 32000 mg/l Save Load

Scaling

No adjustment Na-softening pH-adjustment

	Feed	Adj. Feed
pH:	7.50	7.50
LSI:	-1.35	-1.35
S&DSI:	-1.70	-1.70
TDS (mg/l):	31999.88	31999.88
Ionic Strength:	0.55	0.55
Ionic Strength2:	0.80	0.80
HCO3 (mg/l):	0.00	0.00
CO2 (mg/l):	0.00	0.00
CO3 (mg/l):	0.00	0.00
CaSO4 (%):	0.00	0.00
BaSO4 (%):	0.00	0.00
SrSO4 (%):	0.00	0.00
CaF4 (%):	0.00	0.00
SiO2 (%):	0.00	0.00
Mg(OH)2 (%):	0.00	0.00

Feed-flow control tool:

Here, 1.00 part a part of current flow can be changed within the entire flow.

Button + adds a new flow to the system.

Button  adds a new flow to the system by copying data of a selected flow.

Button  removes current flow.

Button **Total** shows data on the resultant flow in the system. Values of the resultant flow cannot be directly changed and therefore they are locked.

If the system uses various feed-flow modifiers from a "Sedimentation" block, a corrected-flow button ("Corr.") will appear under the total-flow button.

The following data can be changed for every flow:

- Temperature
- pH
- Data on every element of water

Data on ions can be set in mg/l or mEq/l and further adjusted using buttons:

"Save" and "Download" buttons allow saving and downloading water parameters from water database.

By pressing the "Download" button, the following window will appear:

Choose water ✕

User	Seawater	Well Water	Surface Supply	Test
NaCl 500 mg/l				
NaCl 1500 mg/l				
NaCl 32000 mg/l				
MgSO4 2000 mg/l				

In this window, the user will select water type (user; Seawater; Surface supply) by switching between the above buttons.

To save the selected water type, the user have to enter it in a field near the "Save" button and press the "Save" button. The selected water type will be added to user water group.

In the "Scaling" block, the user may either use the softener or adjust pH:

Scaling

No adjustment

Na-softening

pH-adjustment

In the "Softener" tab, the user can set Ca and Mg target values for feed water with the difference between the source and target values being converted to Na:

Scaling

No adjustment

Na-softening

pH-adjustment

Ca Leakage: mg/l

Mg Leakage: mg/l

The "pH Adjustment" tab allows setting acid and alkali for dosing, target pH, and solution concentration:

Scaling

No adjustment Na-softening **pH-adjustment**

Dosing: ▾
 Target pH:
 Reagent concentration: %

Also, the "Scaling" block contains various data and factors for feed flow and corrected flow:

Dosing: ▾
 Target pH:
 Reagent concentration: %

	Feed	Adj. Feed

Mg(OH)2 (%):	<input type="text" value="0.00"/>	<input type="text" value="0.00"/>

3.2 "System" Tab

The tab has the following contents:

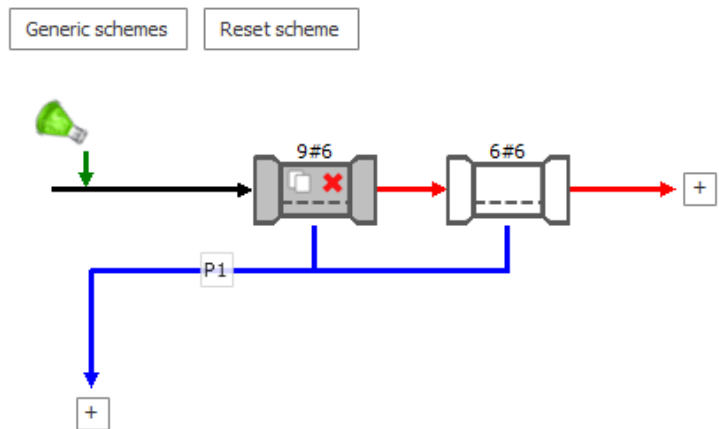

Element lifetime:	1	year(s)
Flow factor:	0.97	
System raw water:	108.00	m ³ /h
Total elements in system:	90	
System recovery:	75.00	%

Pass: 1 +

Permeate flow (P1):	81.00	m ³ /h
Recovery:	75.00	%
Feed flow (F1):	108.00	m ³ /h
Average flux:	24.22	
Blend permeate (B1):	0.00	m ³ /h
Self Recycle (SR1):	0.00	m ³ /h
Back pressure:	1.50	bar

Stage: 1 X 2 +

Vessels count:	9	
Elements per vessel:	6	
Total elements count:	54	
Pre stage pressure:	0.00	bar
Membrane element:	K 8040-C-2	...

The tools that control phases and stages are identical to the above feed-flow control tools.

System data are depicted in the flow diagram on the right. The software provides the possibility of choosing from frequently encountered flow diagrams and booting them by pressing the "Flow Diagram Variants" button.

Feed flow volume, permeate recovery rate and permeate flow volume are interrelated quantities, that is why only two of them can be changed at a time. The third quantity will be calculated automatically.

Mixing is possible only in the last stage. If the scheme is a single-stage, the admixture is added to the input stream to the system (System raw water). If the scheme is a two-stage or more, the admixture will be deducted from the filtrate of the previous stage.

Membrane type can be chosen from a drop-down list, or if additional information on a membrane is needed or an alternative to be selected for a manufacturer, press the button . The following window will show up:

Choose membrane element 

Elements alternatives

Model	Area (m ²)	Productivity (m ³ /h)	Rejection (%)	Test conditions		
				Soln. (%)	Pres. (bar)	Recov. (%)
K 4040-C	8.27	0.38	99.5	NaCl 0.15%	15.51	15
K 4040-T	8.27	0.38	99.5	NaCl 0.15%	15.51	15
K 8040-C	39.02	1.73	99.5	NaCl 0.15%	15.51	15

3.3 "Results" Tab

This tab contains a table of calculated system parameters, including data on errors and warnings. A consolidated table will be built upon successful calculation:

System: Pass 1: Stage 1: Element 3: Concentrate LSI > 0. It is necessary to add acid and/or antiscalant in inlet water
 System: Pass 1: Stage 1: Element 3: Concentrate S&DSI > 0. It is necessary to add acid and/or antiscalant in inlet water
 System: Pass 1: Stage 1: Element 4: Concentrate LSI > 0. It is necessary to add acid and/or antiscalant in inlet water
 System: Pass 1: Stage 1: Element 4: Concentrate S&DSI > 0. It is necessary to add acid and/or antiscalant in inlet water
 System: Pass 1: Stage 1: Element 5: Concentrate LSI > 0. It is necessary to add acid and/or antiscalant in inlet water
 System: Pass 1: Stage 1: Element 5: Concentrate S&DSI > 0. It is necessary to add acid and/or antiscalant in inlet water
 System: Pass 1: Stage 1: Element 6: Concentrate LSI > 0. It is necessary to add acid and/or antiscalant in inlet water
 System: Pass 1: Stage 1: Element 6: Concentrate S&DSI > 0. It is necessary to add acid and/or antiscalant in inlet water
 System: Pass 1: Stage 2: Element 1: Concentrate LSI > 0. It is necessary to add acid and/or antiscalant in inlet water
 System: Pass 1: Stage 2: Element 1: Concentrate S&DSI > 0. It is necessary to add acid and/or antiscalant in inlet water
 System: Pass 1: Stage 2: Element 2: Concentrate LSI > 0. It is necessary to add acid and/or antiscalant in inlet water
 System: Pass 1: Stage 2: Element 2: Concentrate S&DSI > 0. It is necessary to add acid and/or antiscalant in inlet water
 System: Pass 1: Stage 2: Element 3: Concentrate LSI > 0. It is necessary to add acid and/or antiscalant in inlet water
 System: Pass 1: Stage 2: Element 3: Concentrate S&DSI > 0. It is necessary to add acid and/or antiscalant in inlet water
 System: Pass 1: Stage 2: Element 4: Concentrate LSI > 0. It is necessary to add acid and/or antiscalant in inlet water
 System: Pass 1: Stage 2: Element 4: Concentrate S&DSI > 0. It is necessary to add acid and/or antiscalant in inlet water
 System: Pass 1: Stage 2: Element 5: Concentrate LSI > 0. It is necessary to add acid and/or antiscalant in inlet water
 System: Pass 1: Stage 2: Element 5: Concentrate S&DSI > 0. It is necessary to add acid and/or antiscalant in inlet water
 System: Pass 1: Stage 2: Element 6: Concentrate LSI > 0. It is necessary to add acid and/or antiscalant in inlet water
 System: Pass 1: Stage 2: Element 6: Concentrate S&DSI > 0. It is necessary to add acid and/or antiscalant in inlet water

System details

Common

Water type	UF Permeate [SDI < 2]				
Temperature	C	20	Raw water flow	m ³ /h	108

"Print" and "Export to PDF" buttons are in the upper right corner:

3.4 "Costs" Tab

The tab provides information that allows calculating system's cost, as well as its further maintenance. Most of the values will be calculated automatically based on project data, although several coloured parameters have to be set manually.

✓	80.23 rub/m3	Permeate per year (m3)	8760.00					
		Cost of installation (rub)	90000.00					
		Cost of set (rub)	6563.84					
		Cost of system with component parts	96563.84					
		Annual costs (rub)	702845.58					
⚙️	20.55 rub/m3		Quantity per element	Quantity per system	Replacement rate	Quantity per year	Cost per item	Annual costs
		Demand for micro filters	0.80	0.80	4.00	3.20	260.00	832.00
